

MPSCS Bulletin # 2018 - 32

The MPSCS will be upgrading the Midland Simulcast to an IP based system. During the upgrade, voice and data traffic over the MPSCS IV&D (Integrated Voice & Data) network for Radios in and surrounding the Midland Simulcast will be down for approximately 15 minutes. Data service interruptions will include PMDC and AVL data traffic. There will be no hardware replacement, but it will take approximately 15 minutes for all associated equipment to load and reboot new software.

To allow for issues such as system usage, dispatch emergencies, and weather events (fading), the window for completing this work is scheduled from 2AM (0200) to 3AM (0300) on 12/12/2018. Prior to starting work, a LIEN message will be sent to the dispatch centers in that zone.

Dispatch centers are encouraged to review their backup plans and have them in place prior to the upgrade event.

Please share this information with your staff and users of the system to minimize disruptions to your organizations.

If you have an active emergency prior to the schedule outage time at a tower site, please contact the NCC and request they temporarily delay until the emergency has stabilized. If the site outage has started, the site will not return to wide trunking until the update to the system has completed.

The MPSCS NCC may be contacted at (888) 554-4622 or (517) 333-5050 if you have a question regarding the operation of the MPSCS or need assistance preparing for this event.
